

Module 12

Managing Disaster Recovery and Business Continuity

Module Objectives

- Understand cloud backup and recovery methods.
- Review service availability concepts.

Lesson 12.1

Backup and Recovery Methods

Cloud+ CV0-004 Certification Exam Objective:

- 3.3 Given a scenario, use appropriate backup and recovery methods.

Backup and Recovery Methods

- Backup Types
- Backup Objects
- Backup Locations
- Backup Targets
- Backup Schedules
- Data Retention
- Data Replication
- Data Encryption
- Recovery Testing
- Recovery Types and Options

Backup Types

- Cloud backup types
- Full backups
- Synthetic full backups
- Incremental backups
- Differential backups
- Snapshot backups
- Archives

Backup Objects

- System-state backups
- Application-level backups
- Filesystem backups
- Database dumps
- Configuration file backups

Backup Locations

- Offsite storage options
 - Remote office locations
 - Third-party storage facilities
 - Cloud storage
- 3-2-1 backup rule

Backup Targets

- Tape media
- Disk media
- Cloud storage
- Object storage
- Backup management

Backup Schedules

- User data
- Configuration files
- System-state configurations
- Database configurations
- Database data

Data Retention

- Data retention policies
- Best practices
- Backup retention

Data Replication

- Replication examples
- Synchronous vs. asynchronous replication

Data Encryption

- In transit encryption
- At rest encryption

Recovery Testing

- Backup recoverability
- Backup data integrity

Recovery Types and Options

- In-place/overwrite restoral
- Side-by-side/parallel restoral
- Alternate location restoral
- Granular file restoral
- Snapshot restoral

Lesson 12.2

Service Availability Concepts

Cloud+ CV0-004 Certification Exam Objective:

- 1.2 Explain concepts related to service availability.

Service Availability Concepts

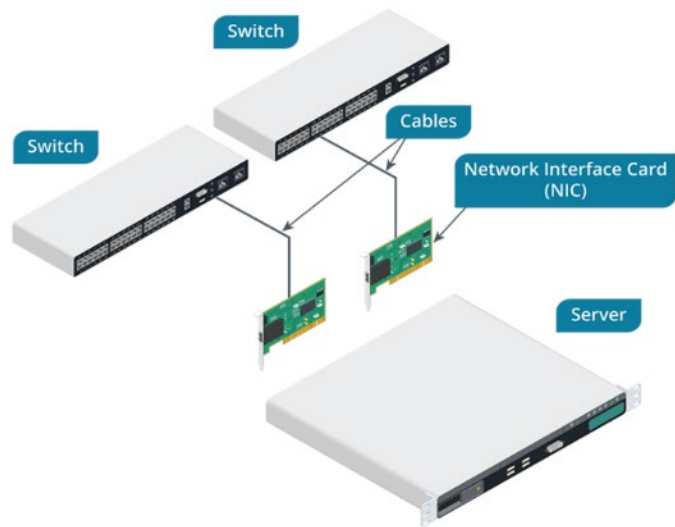

- Resource Availability
- Network Configurations for Resource Availability
- Multi-cloud Tenancy
- Disaster Recovery
- Disaster Recovery Sites

Resource Availability

- Cloud bursting
- Edge computing
- Availability monitoring

Network Configurations for Resource Availability

- NIC teaming
 - Hardware or software load balancer
 - Scheduling types
- Load balancing
 - Hardware or software load balancer
 - Scheduling types

NIC teaming provides network redundancy for servers. (Images © 123RF.com)

Multi-cloud Tenancy

- Hybrid cloud
- Multi-cloud

Disaster Recovery

- Service level agreements (SLAs)
- Recovery time objectives (RTOs)
- Recovery point objectives (RPOs)
- Mean time to recovery (MTTR)
- Mean time between failures (MTBF)

Disaster Recovery Sites

- Hot sites
- Warm sites
- Cold sites
- Separate geographical locations
- Cloud sites

Module Summary

- Redundancy, Availability Zones, Multi-Cloud Solutions: Enhance service, application, and data availability.
- Backup Management: Ensure correct information is backed up and restore processes are compliant.
